

Appendix

Table 1. SPIDER tool

<i>(S) Sample</i>	Midwives who work in midwifery-led continuity of care models (MCoC) (including caseload/midwifery group practice) which provide care throughout the pregnancy, birth and postnatal continuum.
<i>(PI) Phenomenon of interest</i>	The role of part-time workforce arrangements (including job-sharing, reduced hours, shared caseloads) in the sustainability of MCoC models in Australia.
<i>(D) Design</i>	Any research studies including qualitative, quantitative or mixed methods research (MMR). Limited by geographic location (Australia) and date range (2010-2022)
<i>(E) Evaluation</i>	Including but not limited to: <ul style="list-style-type: none">• Perspectives of midwives working in caseload models of care.• Perspectives of student midwives exposed to caseload models of care.• Perspectives of obstetricians working with caseload models.• Perspectives of managers/other professionals working with caseload models.• Quantitative information regarding employment arrangements that involve less than 1.0 FTE within caseload models of care.
<i>(R) Research Type</i>	Integrative review : synthesis of quantitative, qualitative and MMR using a convergent integrated approach and mixed method appraisal tools. A five stage design based on Whitemore & Knafel (2005) with a convergent integrated approach to data collection and evaluation.
